

NovaLock™ Dilution Bottles

A smartly designed pre-filled dilution bottle

Easy to open. Easy to close. Leak Resistant. Color-coded. No shrink bands to remove. No strips to pull. Practical. Cost effective. Entirely recyclable. Just smartly designed!

The Lockdown Tab:

The NovaLock Dilution Bottles are designed to be the easiest and most convenient dilution bottles available. The patented lockdown technology built into the NovaLock Dilution Bottle keeps the lid held firmly in place during shipping and storage. The bottle is effortlessly and aseptically opened with a simple upwards press of the lockdown tab. With NovaLock Dilution Bottles there are no difficult shrink bands or pull strips to remove.

Distinctive Product Identification:

Each NovaLock Dilution Bottle comes with a brightly colored, tamper-evident label. The color coded label identifies the type and volume of diluent in the bottle. The label is affixed to both the lid and the body of the bottle. Only when the user lifts the lid will the label break at the tamper evident perforation.

Other Advantages:

The NovaLock Dilution Bottle is molded using a sturdy recyclable polypropylene plastic. It is designed with a wide 1 ¼ inch (4.3 cm) opening and a hinged lid that stays in the open position for easy sample addition. Our dilution bottles are pre-filled with 90 or 99 mls of Butterfield's phosphate buffer, phosphate buffer with magnesium chloride, or peptone water. All units are gamma irradiated for sterility and have a two year shelf life from date of manufacture.

Available Pre-filled NovaLock Dilution Bottles	Item No:	Packaging:
NovaLock Dilution Bottles with 90 ml Butterfield's Phosphate Buffer	NLD-90BFD	60 per case
NovaLock Dilution Bottles with 99 ml Butterfield's Phosphate Buffer	NLD-99BFD	60 per case
